

## ARCHITECTONIC SERVICES

Home is the most important place of each person. We spend most of our time here, we are dealing here with family and friends, we talk, we get bored or have a lot of work. If you decide to cooperate with us, we will help you your idea of a dream to transform housing into something concrete, even before actual implementation commences.

Make use of our extensive knowledge and long-term experience with adjusting layouts. We have deep knowledge of the layout of every flat – and thus of its possibilities too.

- during the first consulting session with you we will assess whether the flat unit chosen meets your needs and the requirements of superior living
- we will answer various questions of yours, such as: “Will the furniture I need, e.g. a dining table for six persons, a desk, an upright piano, a large bed or a sufficient number of wardrobes fit into the flat? Is the kitchen spacious enough for an American refrigerator? Is it possible to add a shower or a bidet into the bathroom?”
- we will design an efficient use of space in accordance with ergonomic requirements, we will plot your requirements into an understandable plan in the form of an architectural study
- we will discuss the design elaborated and submit the final version of your new home
- we will assess and recommend the scope of necessary client changes and the need for construction modifications
- we will submit price options, which will assist you in decision-making
- we will hand over complete documentation and the valuation of the design approved for execution
